

Industrial scale heating

Solar Heat for processes

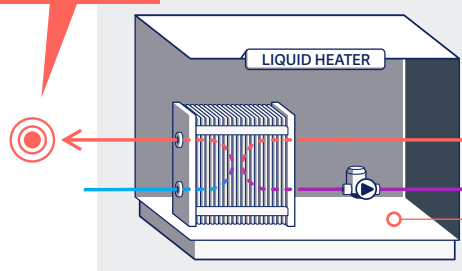

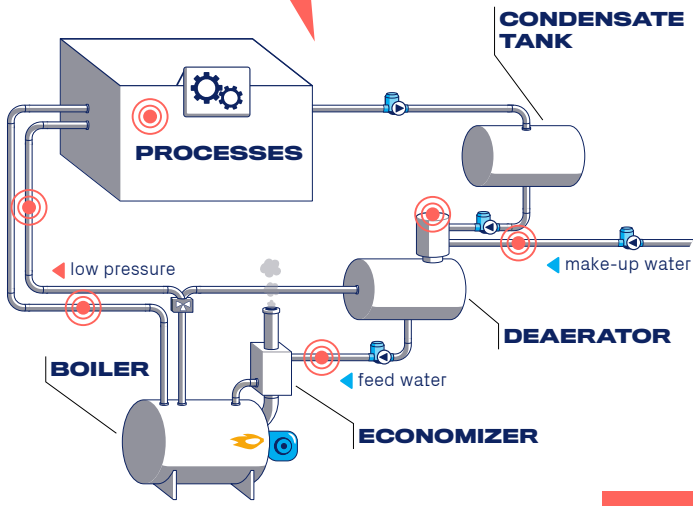

The Heat from the solar collector field is connected to a solar central which controls the output of the heat

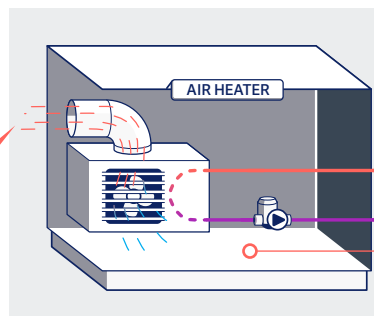

Solar Heat can easily be integrated to existing heating system

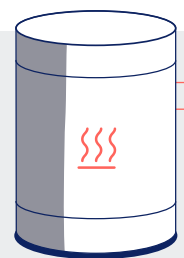

160°C

140°C

heat batteries can supply processes with solar heat around the clock.

SAVINGS

With solar heat, cost savings will be made in reduced fossil fuel consumption and maintenance. Solar thermal also reduces potential challenges that come with fuel price fluctuation and carbon taxes.
