

Industrial scale heating Solar Steam for processes

The Heat from the solar collector field is connected to a solar central which controls the output of the heat

Solar Steam can easily be integrated to an existing steam network

4 bar
150°C

8 bar
175°C

Steam compressors increases pressure and superheats the steam

SAVINGS

With solar steam, cost savings will be made in reduced fossil fuel consumption and maintenance. Solar thermal also reduces potential challenges that come with fuel price fluctuation and carbon taxes.
