

Lower your operational and energy costs *with* Ampere.

Ampere is a continuous energy intelligence and execution platform built for the plant floor of industrials and manufacturers. Ampere's Marichi platform helps operators cut energy spend immediately, reduce downtime, and unlock free cash through rebates, grants, and financing.

Who we serve

- Industrials and manufacturers running energy-intensive operations.
- Operators — COOs, FMs, and CEOs — pursuing automation, process upgrades, and optimization.

Problems we solve

- Rising and volatile energy and maintenance costs that erode margins.
- Complex C&I incentives — utility, federal, state — and capex financing that go uncaptured.

OUR SOLUTION • MARICHI

Continuous monitoring & AI-driven *optimization* for the plant floor.

Marichi turns utility bills and equipment data into immediate savings, anomaly alerts, and high-ROI upgrade paths — running continuously, not as a one-off audit.

HOW WE WORK

Connect once. Marichi *optimizes* continuously.

01 • Connect

Share a recent utility bill and equipment data.

Marichi starts monitoring continuously — no audit cycle, no waiting for the next quarterly review.

02 • Optimize

We find free money and immediate savings.

Switches to the lowest-cost tariff, flags anomalies and equipment waste in real time, writes rebates and grants, and prioritizes high-ROI upgrades with matched financing.
